

## Jupiter area dentist describes All-on-4 dental implants

There are many ways that patients in the Jupiter area can improve their smile after tooth loss. Dr. Steven A. Burman of Burman Dental, LLC is a quality dentist in the community who understands how missing teeth can negatively affect the smile's function and appearance. When patients are faced with replacing their teeth in a way that works best for their lifestyle, many patients may find that All-on-4 dental implants are the way to go! All-on-4 dental implants help a patient's full dentures become a more permanent fixture in the mouth.

For individuals who have struggled with traditional dentures that do not stay in place, cause sores, irritate the mouth, or have been ill fitting in general, All-on-4 dental implants may be the best solution. Dr. Steven A. Burman and the team of Burman Dental, LLC can determine if patients are appropriate candidates for this treatment, as implants do require a specific amount of bone in order to place them successfully and keep them stable when used with the dentures. X-rays are taken to evaluate bone structure to determine if it's conducive to the placement of implants for All-on-4 dentures.

All-on-4 dental implants are typically smaller than the normal implants used to replace a single tooth. They require less invasive surgery and heal faster to allow the dentist to place the full denture sooner. Patients do not have to remove these dentures, but they are encouraged to brush and floss around them properly to keep the gums healthy and free from problems such as periodontal disease.

Dr. Steven Burman of Burman Dental, LLC encourages individuals to take the time to learn about how All-on-4 dentures can completely change their quality of life. No longer do patients have to soak their dentures overnight to keep them clean, and patients can rest easy knowing their dentures fit better and do not irritate the gums as their previous set did. Patients love these restorations;; they are permanent and stronger than conventional full dentures.
